EXPERIENCE

Stripe - Ecosystem & Startup Products

San Francisco, CA

Incoming Software Engineer

2026 - Present

Mercor - Reinforcement Learning Environments, Benchmarks

San Francisco, CA (Remote)

Software Engineer

2025 - 2026

- Evaluated ACE benchmark tasks by reviewing **100+** model-generated code reviews on **Grafana, Terraform, and Docker** repositories, measuring bug localization accuracy, patch correctness, and reproducibility across multi-step code changes (**Python, Go**).
- Implemented Python evaluation harnesses treating ACE coding tasks as MDPs, scoring grounded tool usage, hallucination rate (invalid APIs, fabricated configs), and end-to-end task completion (**Python**).
- Improved ACE benchmark reliability by validating **30+** peer submissions and flagging consistent failure modes, including incorrect Terraform resource semantics, stale Grafana context usage, and invalid Docker build logic (**Python**).

Datadog - AI Infrastructure

New York, NY

Software Engineer

2025 - 2025

- Developed an AI/LLMs powered system for mapping more than **95%** cloud resource types in the Resource Catalog to the corresponding resource types defined in Terraform, providing a high level view of the cloud infrastructure (**Python, Go**).
- Enhanced Terraform support features by implementing AI-based detection for resource blocks within ingestion and extending the indexer to handle diverse file formats, enabling comprehensive resource evaluation (**Go, Terraform**).
- Integrated Claude Code CLI into IaC analysis workflows, fine-tuning prompts to identify absolute path patterns and standardize local module parsing (**Python, Claude CLI**).

Microsoft - Copilot AI

Redmond, WA

Software Engineer

2024 - 2024

- Configured a Copilot AI enabled and LLMs data trained deflection bot to handle more than **80%** of customer queries, enabling the customers to self-serve their requests faster and efficiently (**Python**).
- Created Figma mock-ups of app screens and made sample Power Apps that highlight native capabilities such as barcode/NFC reading, mixed reality, etc. (**React.js, JavaScript, HTML/CSS**).

Amazon - Supply Chain Optimization Technologies

Bellevue, WA

Software Development Engineer

2023 - 2023

- Extracted weblab info from PPDC (Promise Policy Dynamic Configuration) containing crucial Promise configurations for constraints, contribution profit, cost band, ship-option eligibility, overrides etc into AWS APP Config (**Java, Kotlin**).
- Constructed networking systems to deliver products to **250,000,000+** customers with approximately **9%** lower latency rate (**Java**).

National Cancer Institute - National Institutes of Health

Bethesda, MD

Machine Learning Researcher

2021 - 2022

- Implemented machine learning approach to accurately detect tumor cells in ultra-low coverage single-cell DNA sequencing data, optimizing algorithm for approximately **98%** detection across Patient S0 and Patient S1 (**Python**).
- Constructed a computational model to mathematically model ultra-low coverage scDNA sequencing data of tumor cells (**Python**).

EDUCATION

Princeton University

Princeton, NJ

A.B. in Computer Science

- **Relevant Coursework:** Algorithms and Data Structures, Operating Systems, Machine Learning Algorithms, Computer Architecture, Advanced Programming Techniques, Ethics of Computing, Theory of Computation, Theory of Autonomous Vehicles, Distributed Systems, Numerical Computing and Machine Learning
- **Research:** Thesis on AI Agent Evaluation & Alignment. Associate of Science of Agent Evaluation Research Group.

ADDITIONAL INFORMATION

Languages: Java, Python, JavaScript, HTML, CSS, Matlab, C#, C/C++

Developer Tools: Git, Google Cloud Platform, PyTorch, TensorFlow, VS Code, Visual Studio, PyCharm, IntelliJ, Eclipse

Interests: Full Stack Development, Artificial Intelligence, Machine Learning, Data Science, Infrastructure
